

Customer Journey Map

Date	29 September 2026
Team ID	SWTID-2026-7492
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Customer Journey Map

The journey maps the ServiceNow user's experience stage-by-stage, including actions, touchpoints, thoughts, feelings, ownership and opportunities for improving secure record access.

Phase of Journey	Stage 1 Access Request	Stage 2 ACL Evaluation	Stage 3 Authorized Operation
Actions <i>What does the customer do?</i>	- Logs in - Opens the Institution Details list - Requests to view a record	- ServiceNow evaluates roles - READ ACL checks bb1 - Branch value is checked	- Views permitted EEE record - Creates/edits/deletes when role permits - Receives access result
Touchpoint <i>What part of the service do they interact with?</i>	- Login - Application Navigator - Institution Details list	- ACL configuration - User roles - Branch field	- Record form/list - New/Edit/Delete actions - Access response
Customer Thought <i>What is the customer thinking?</i>	"Can I access the records?" "Where is the Institution Details table?"	"Does my role allow this?" "Is this record EEE?"	"I should see only what I am authorized to use." "My permitted action should work."
Customer Feeling <i>What is the customer feeling?</i>	Curious and cautious about access.	Concerned about authorization and data visibility.	Confident when access matches the assigned role; frustrated if unexpectedly denied.
Process Ownership <i>Who is in the lead on this?</i>	ServiceNow user / administrator	ServiceNow security administrator	ServiceNow ACL configuration and administrator
Opportunities <i>How can we improve this stage?</i>	- Clear navigation - Clear user/role setup - Simple test accounts	- Explicit ACL conditions - Separate roles for operations - Test with impersonation	- Consistent ACL behavior - Clear permission design - Document expected outcomes
